

TRILITY Ozone

Ozone by TRILITY is revolutionising the mains cleaning and mains disinfection industry. With more local government authorities and water utilities reducing their use of harmful superchlorination.

Ozone by TRILITY is quickly becoming the preferred alternative across the country. TRILITY use Ozone for new mains disinfection and have developed a process to use Ozone as an effective way to clean and disinfect existing watermains.

Cleans and disinfects

Proprietary technology cleans and provides a higher level of disinfection than any other product on the market

Cost saving

Savings of 50% or more compared to alternatives

Time saved

Ozone

Traditional

one hour

24 hours

Ozone is a faster and more effective method of mains cleaning and disinfection compared to traditional methods

Time saving

Same day connections

Ozone is an incredibly strong oxidant with the added advantage of breaking down rapidly into harmless oxygen, creating an environmentally friendly solution.

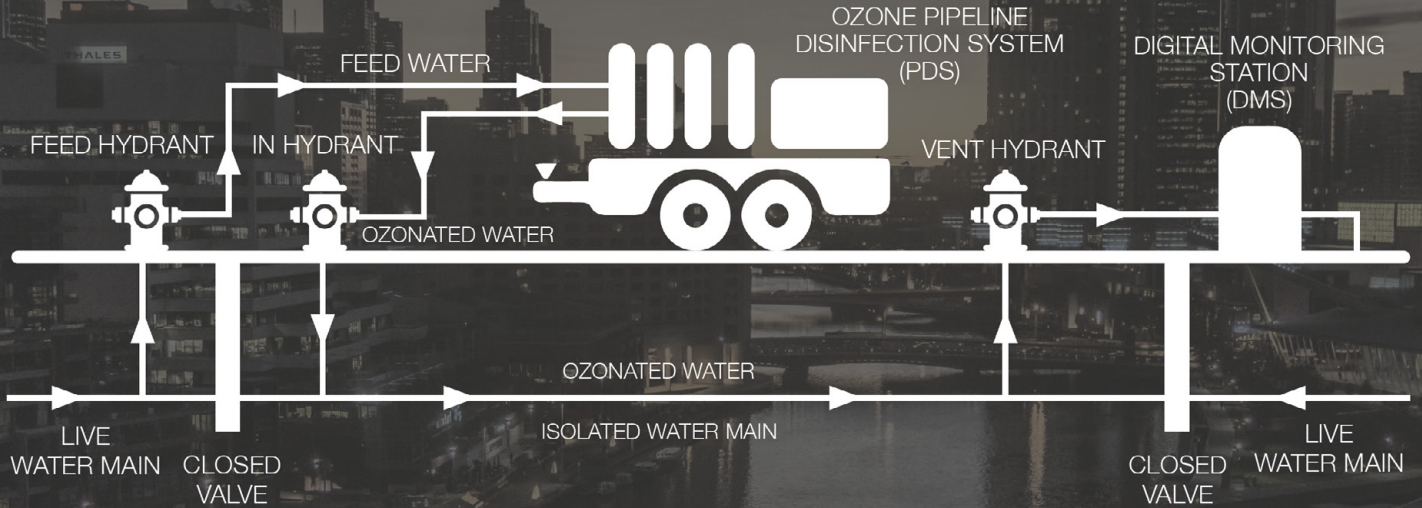

Experienced staff work with the customer to plan and execute a program of works to ensure customer interruption is minimised.

TRILITY's proprietary systems create true third-party validation for disinfection. This means customers are assured that true disinfection and cleaning has been successfully achieved.

With TRILITY's unique mobile ozone trailer design, previously inaccessible areas are now easily accessed giving TRILITY the ability to support more customers.

The ozone process

Mains disinfection and cleaning process using ozone

TRILITY is NATA accredited and can also provide pressure testing of new watermains to complement our disinfection service.
