

Providing mobile pipeline
disinfection and testing services

TRILITY Network services

TRILITY is an Australian and New Zealand company committed to being a 'partner of choice' in the delivery of water, wastewater and environmental services. At TRILITY we make it our business to understand and support yours by offering a diverse range of services, including Network services.

Servicing Southeast Queensland and beyond, we ensure that our commitment to excellence extends seamlessly wherever our services are needed. Our Network services team comprises of technicians with extensive experience in infrastructure testing and disinfection.

TRILITY upholds rigorous industry and regulatory standards, guaranteeing unparalleled integrity in our services.

Partner with TRILITY's experienced Network Services team to ensure optimised infrastructure performance. Your satisfaction is our priority, driving us to exceed your expectations and deliver consistent, reliable service. Our commitment to quality is backed by NATA certification, ensuring the highest standards of precision and reliability.

Contact us to learn more about our Network services and how we can address your specific requirements.

Our services

NATA accredited services

Hydrostatic pressure testing

TRILITY's hydrostatic pressure testing services are meticulously designed to assess pipeline structural integrity under various operational conditions. Our advanced methodologies and equipment ensure precise evaluations, identifying vulnerabilities and leaks with unrivalled accuracy.

Sewer manhole and pipeline testing

We have trusted testing protocols for sewer manholes and pipelines, meticulously scrutinising integrity to prevent contamination and mitigate system failures. Our thorough assessments detect defects and infiltration, maintaining compliance with industry standards and regulatory requirements.

Ovality testing

Rely on our ovality testing procedures to accurately gauge pipeline roundness and structural integrity. With our advanced techniques, deviations from circularity are swiftly identified, enabling proactive maintenance measures to ensure seamless functionality.

Water sampling

Ensure the highest standards of water quality with our water sampling services. Our expert team follow stringent procedures to collect water samples accurately and reliably, preventing contamination while ensuring representative results. Trust us to provide the foundation for precise analysis and compliance with regulatory requirements, guaranteeing the safety and quality of your water resources.

Our services

Ozone disinfection and sampling leverage

TRILITY's Ozone disinfection services provide a green alternative to network disinfection. Through our mobile services, we tailor our applications according to our customer's needs, with a range of benefits including:

Cleans and disinfects

Proprietary technology cleans and provides a higher level of disinfection than any other product on the market

Cost saving

Savings of 50% or more compared to alternatives

Time saving

Same day connections

Eco friendly

The environmental sustainability benefits of using ozone water treatment are significant and include:

- Reduced chemical footprint
- Elimination of harmful by-products
- Minimal environmental impact
- Energy efficiency
- Reduced air emissions
- Lower carbon footprint
- Biodegradability
- Versatility in contaminant removal
- Conservation of ecosystems
- Protection of drinking water sources
- Corrosion control and infrastructure preservation
- Reduced hazardous waste
- Adaptability to green practices

Chlorination and sampling count

TRILITY has chlorination and sampling expertise to maintain optimal water quality standards. Our precise dosing, monitoring, and sampling protocols guarantee effective disinfection outcomes, meeting regulatory benchmarks and environmental sustainability goals.
