

Servicing and Maintenance

Disinfection | Chemical Dosing Systems

High standards of service for water and wastewater treatment systems

Regular servicing
minimises the likelihood
of unscheduled repairs
and downtime

Preventative maintenance

Ensuring optimum performance of water treatment and chemical dosing systems

TRILITY provides preventative maintenance and servicing contracts for water and wastewater treatment systems to ensure optimum service life and performance.

Regular servicing also minimises the likelihood of unscheduled repairs and downtime. We provide these services for many industries including local councils, municipal water and wastewater, mine sites, commercial and leisure facilities.

TRILITY issues full service reports detailing the work carried out to provide peace of mind to our clients. The report includes situation analysis photos, safe work documentation and photographic evidence of the completed works. It also records any damaged and/or replaced equipment or parts and highlights any areas of concern or recommendations for parts that may need to be replaced.

Another benefit is the provision of a full service history to our clients providing insights for asset management with future assurance planning and budgeting capability. In addition the service reports can be customised to suit client requirements.

Maintenance plans may also be tailored to include call-out and emergency response services as required.

Our services

- Chlorine gas systems
- Chemical dosing packages
- Analytical instrumentation and control
- Electrochlorination
- Dosing pump maintenance
- Plant and filter refurbishment
- UV disinfection
- Equipment overhaul
- Spare parts and repair
- Detailed service reports
- Remote site servicing

- Preventative maintenance
- Call-out
- Emergency response

Developing key industry partnerships

TRILITY works with manufacturers to ensure our maintenance schedules adhere to their recommendations.

We are service partners with several key equipment suppliers in Australia who recognise that the long-term performance of their equipment is only as good as the routine maintenance it receives.

Experience

Committed to providing high standards of service and quality workmanship

TRILITY is a proud Australian and New Zealand company with a team of experienced technicians. Our experience is developed in an environment where the systems we maintain are critical to the protection of public health and environmental compliance. We understand that this critical maintenance is central to our client's operations

We are licensed electrical contractors with a qualified service team. Our technicians' qualifications include:

- Self-contained breathing apparatus
- First aid
- Operate and control liquefied chlorine gas disinfection
- Fluoride handling
- Electrical licence
- White card
- Confined space
- Elevated work platforms
- Working at heights
- Low voltage rescue

Each technician also has a fully kitted out service vehicle custom designed with spare parts stock on board. The vehicles also carry specialised testing equipment and tools with full PPE safety equipment including self-contained breathing apparatus and chemical leak detection.

TRILITY services over 500 sites across Australia in varied markets, including:

- 168 municipal
- 134 water utilities
- 47 resources
- 33 recreation
- 23 food and beverage
- 21 manufacturing
- 13 agriculture
- 2 healthcare
