

A full range of water treatment solutions

TRILITY is a proud Australian company with capabilities extending across the full life cycle of water, wastewater treatment, re-use and desalination projects.

With a footprint across Australia, TRILITY has more than 20 years' experience managing long-term projects for the municipal and industrial sectors, ranging from small, purpose-built plants to large-scale infrastructure.

'We have a comprehensive understanding of the Australian water sector that enables us to deliver a full range of solutions while focusing on the provision of superior-quality services every day,' said TRILITY Managing Director Francois Gouws.

'Establishing and fostering strong partnerships with local councils and communities plays a pivotal role in our day-to-day operations. We share a common goal with the local government sector: to seek out the best value for money and the most sustainable product for local communities.'

TRILITY's long-term partnership with Gladstone Regional Council illustrates the benefits that come with the company's expertise. The design, build and operate contract for new infrastructure ensured water security for residents and businesses located at the southern end of the Great Barrier Reef in Agnes Water and Seventeen Seventy.

The Agnes Water and Seventeen Seventy Integrated Water Project was recently recognised by the Institute of Public Works Engineering Australia, Queensland division (IPWEAQ) for Excellence in Design and Construction of a Local Government/Public Works Project.

TRILITY's Queensland footprint also extends to the Townsville City Council Water Supply Upgrade Project, a 20-year plan to guarantee long-term water supplies for the region, as well as the Aratula and Helidon Sewerage Treatment Plant Wetlands.

A high level of coordination and cooperation with local communities is essential for delivering water services to millions of Australians every day.

This level of collaboration with local government is evident across all TRILITY-managed facilities across Australia, including South Australia, where the company operates and maintains more than 15 facilities.

Riverland Water comprises 10 water treatment plants, serving a population of 150,000 people living in more than 90 communities along the Murray River.

Other projects across regional South Australia include the Victor Harbor Wastewater Treatment Plant, Waikerie Wastewater Scheme, Berri Barmera Reuse Scheme and the Onkaparinga Wastewater Treatment Plant. TRILITY also recently

reached agreement with the Adelaide Hills Council to operate and maintain the Birdwood Wastewater Treatment plant for at least the next 12 months.

TRILITY's strength across whole-of-life solutions will be seen for decades to come in Western Australia. The Mundaring Weir Water Treatment Project, a joint enterprise between GHD, ACCIONA Agua and TRILITY (ATJV), will operate and maintain the 165-million litre per day Water Treatment Plant, a new pumping station, and interconnecting pipework for the next 35 years.

Now fully operational, the project will secure the major water source for around 33,000 rural and town services in the Goldfields and Agricultural Water Supply Scheme.

'This critical asset will secure a safe and high-quality water supply for regional Western Australia, as well as meeting the needs of domestic and industrial growth into the future,' Mr Gouws said. ■
